

Automated Weekly Audit Report Email Distribution

Streamlining compliance with automated extraction, summarization, and distribution of critical audit insights.

Use Case Overview

Factory Delivery Orchestrator (FDO)

Serves as the central hub for tracking delivery, compliance, and execution metrics across organizational projects.

The Challenge

Manual extraction and distribution of critical audit insights is time-consuming, repetitive, and prone to human error.

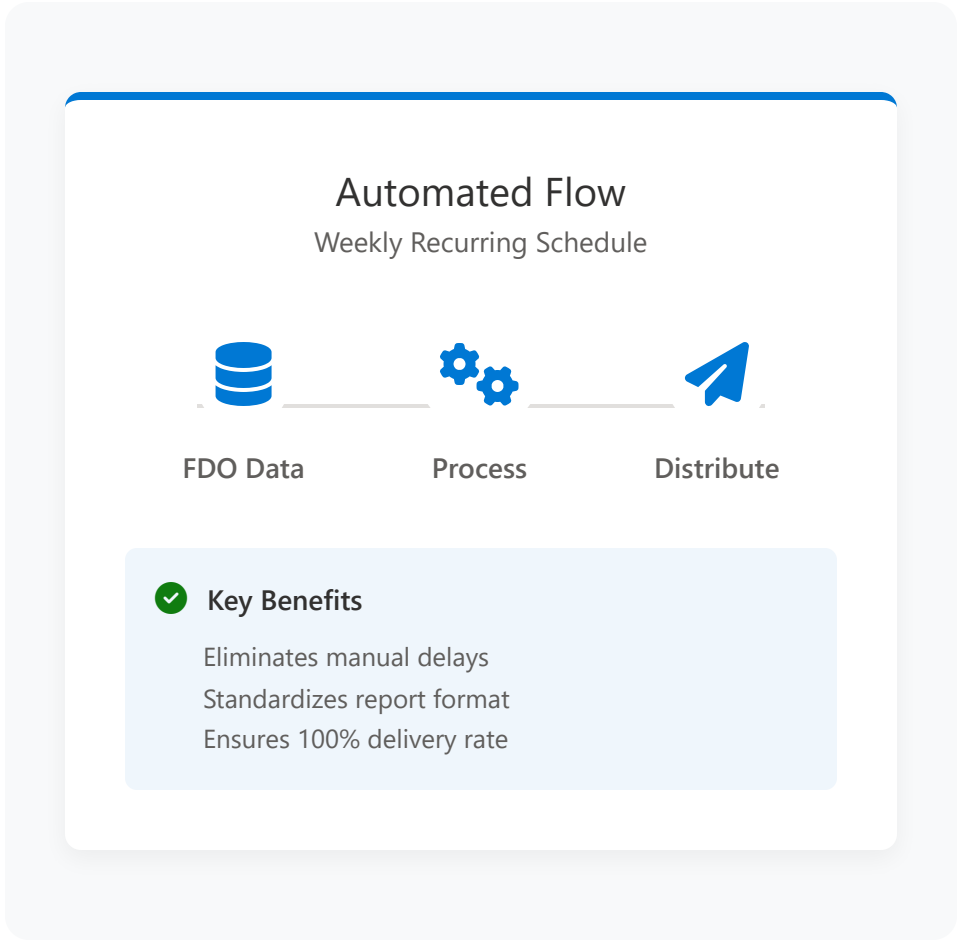

The Solution

Automated weekly workflows ensure consistent visibility, eliminating manual effort and improving compliance tracking.

Scope of Automation

Includes weekly data extraction, generation of standardized summaries, and email delivery with PDF/Excel attachments.

Problem Statement

High Stakeholder Demand

Audit reports must be shared regularly with multiple stakeholder groups to maintain project health, but distribution lists are often outdated or manual.

Manual Process Bottlenecks

Manual extraction and emailing leads to significant operational delays, missed communication deadlines, and wasted effort on repetitive tasks.

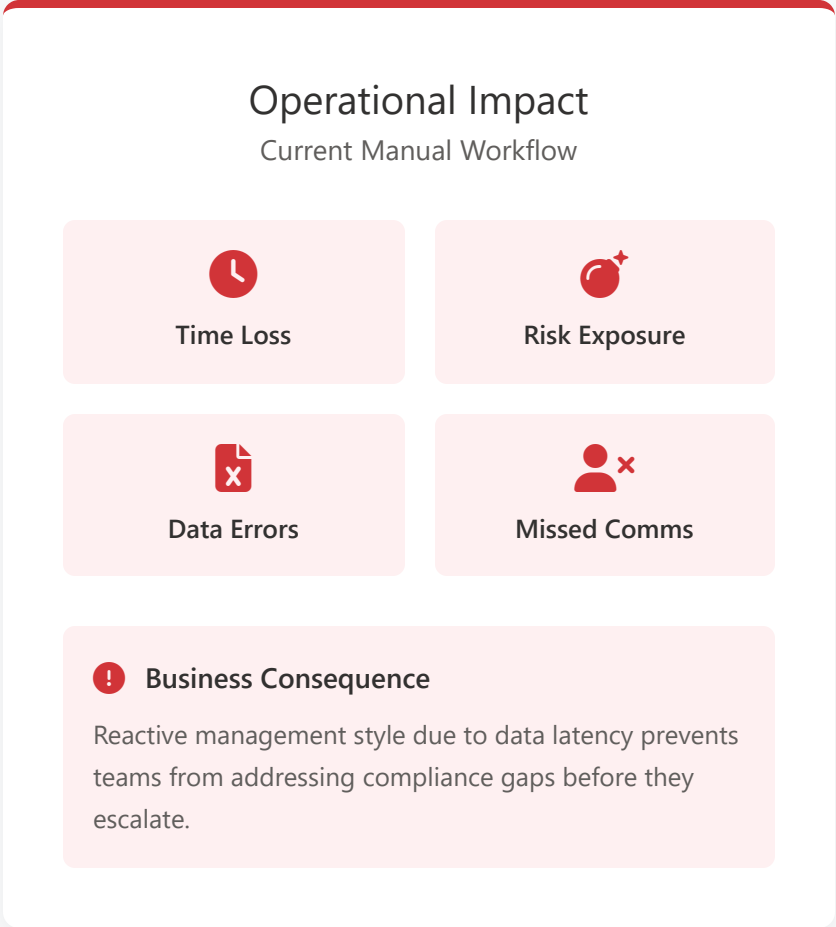

Data Inconsistency

Human error during manual compilation often results in inconsistent report versions, reducing audit effectiveness and stakeholder trust.

Lack of Timely Insights

Teams lack real-time visibility into delivery and compliance issues, forcing them to react to problems rather than proactively managing risks.

Project Objectives

- 

Automated Extraction

Eliminate manual data pulling by automatically extracting audit reports from FDO on a scheduled weekly basis.
- 

Standardized Reporting

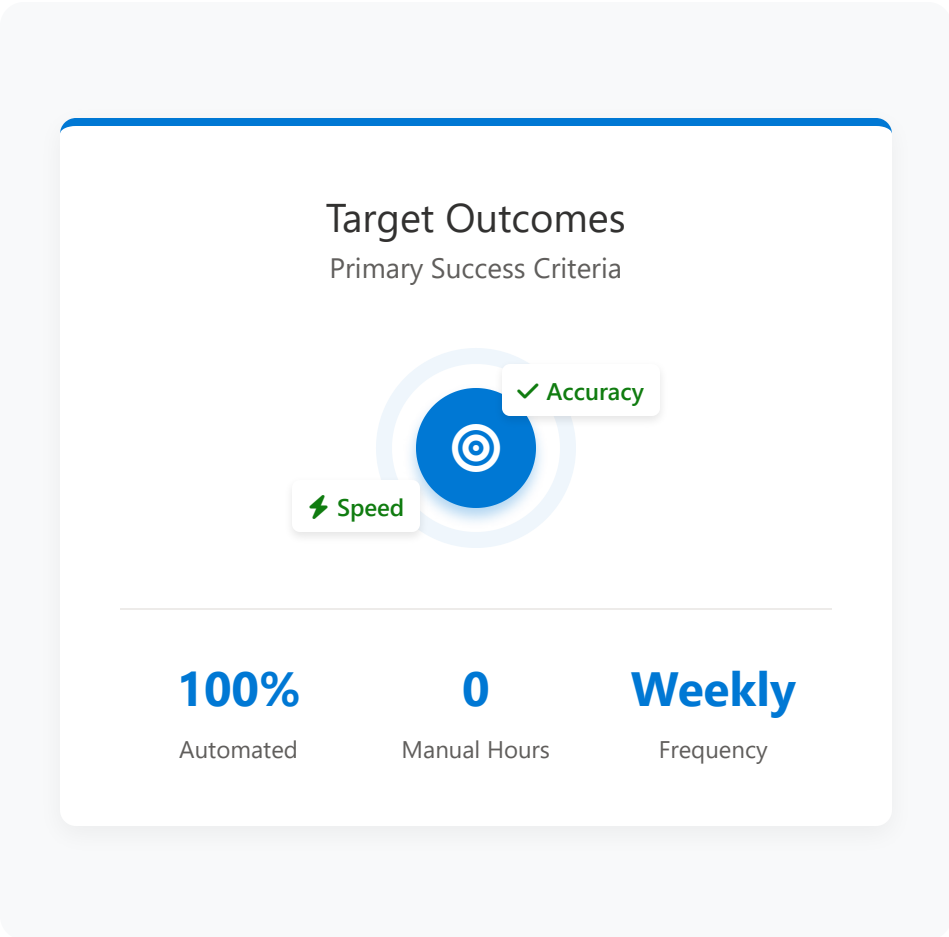

Generate consistent, formatted summaries every week, ensuring all stakeholders review the same version of the truth.
- 

Streamlined Distribution

Automatically email reports to predefined recipient groups (Project Managers, Audit, Leadership) without manual intervention.
- 

Enhanced Compliance

Ensure timely delivery of accurate data to support proactive risk management and continuous compliance monitoring.

Project Actors

FDO Automation / [Stakeholders & Systems](#)

People

Key Stakeholders & Recipients

Audit / Compliance Team

Primary consumers of compliance data; define audit criteria.

Project Managers

Responsible for addressing findings and maintaining delivery standards.

Delivery Leadership

Oversee overall project health and risk mitigation strategies.

Systems

Tools & Infrastructure

FDO (Factory Delivery Orchestrator)

Source of Truth for project delivery and compliance data.

Automated Reporting Service

Orchestration engine (Logic Apps/Power Automate) & Email Gateway.

Preconditions & Trigger

FDO Automation / [Requirements & Scheduling](#)

Preconditions

Required State Before Execution

Data Availability

Audit reports must be generated and available within the FDO system for the target period.

Access Permissions

Service account must have authorized read access to specific FDO audit data endpoints.

Configuration

Email recipient lists (To/Cc) and distribution schedules must be pre-configured.

Trigger

Automation Initiation Logic

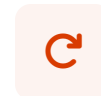

Scheduled Frequency

Workflow is triggered automatically on a **Weekly** basis.

Execution Time

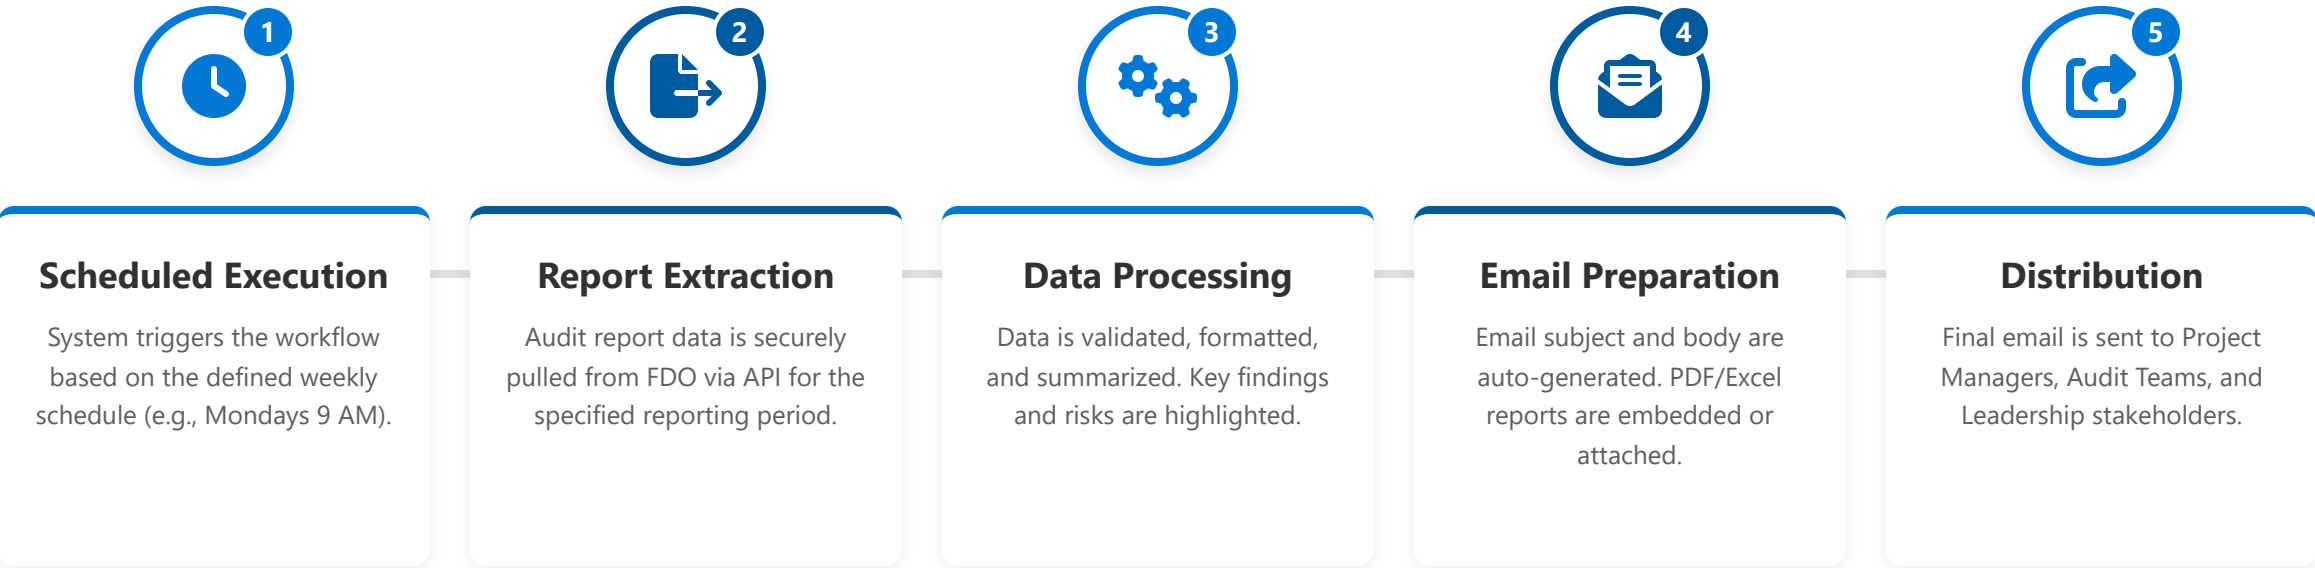

Default Schedule: **Every Monday at 9:00 AM** (Local Time).

Reliability

System automatically retries if the trigger fails or FDO is momentarily unavailable.

End-to-End Workflow

Functional & Non-Functional Requirements

FDO Automation / [System Specifications](#)

Functional Requirements

- ✓ **Scheduled Extraction**
System must automatically query and pull audit data from FDO APIs on a configurable weekly schedule.
- ✓ **Data Transformation**
Raw data must be processed to generate summaries, flagging compliance risks and critical findings.
- ✓ **Email Automation**
Generate formatted emails with dynamic subject lines and embedded summaries for recipients.
- ✓ **Attachment Support**
Generate and attach detailed audit logs in standard formats (PDF or Excel) for offline review.
- ✓ **Configurable Settings**
Allow administrators to update recipient lists, schedule times, and

Non-Functional Requirements

- ✓ **Reliability & Availability**
Ensure 99.9% uptime for the scheduling engine with automatic retry mechanisms for transient failures.
- ✓ **Data Integrity**
Extracted data must match FDO source records exactly, with validation checks before distribution.
- ✓ **Security & Access**
Use secure service principals for API access; ensure data is encrypted in transit and at rest.
- ✓ **Compliance Policies**
Adhere to enterprise email policies (e.g., footer disclaimers) and data classification standards.
- ✓ **Performance**
Report generation and email delivery should complete within 15

Business Value

Strategic impact of automating the audit process

Consistent Visibility

Ensures all stakeholders have the same view of compliance status at the same time, eliminating version control issues.

Operational Efficiency

Reduces operational overhead by automating repetitive extraction tasks, allowing teams to focus on resolution.

Improved Compliance

Enhances compliance monitoring capabilities through regular, reliable reporting that doesn't depend on human availability.

Risk Management

Enables proactive risk management by surfacing audit findings faster, reducing the window of exposure.

Indicative Technology Stack & Flow

Core Components

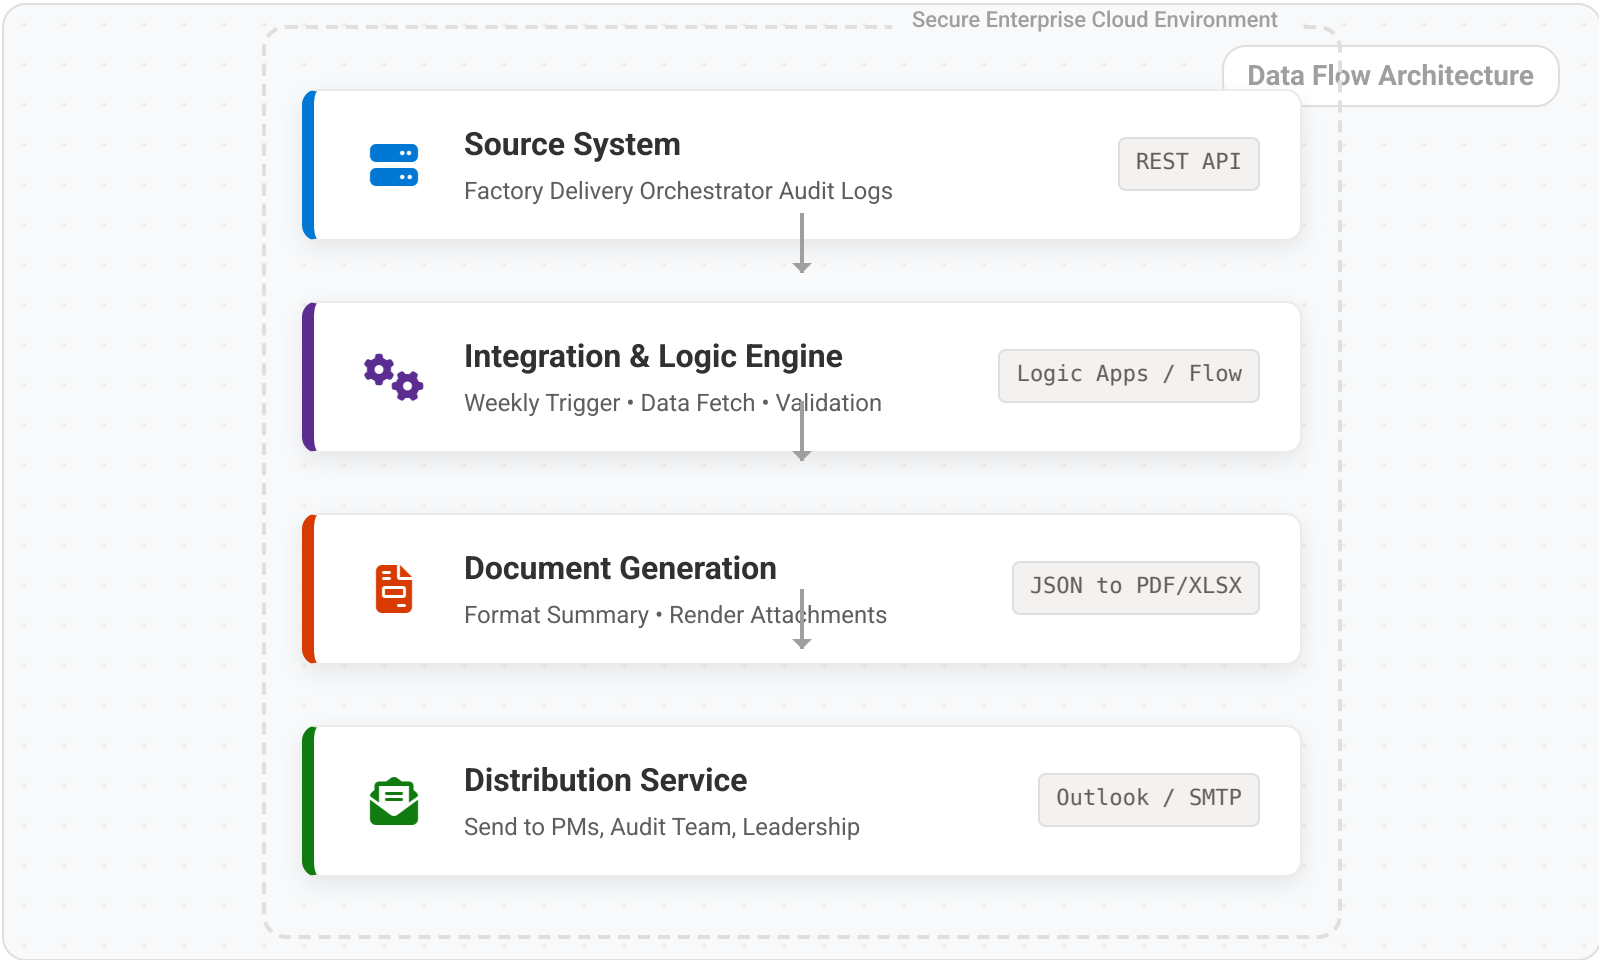

**Data Source**
FDO (Factory Delivery Orchestrator)

**Extraction**
Secure API / Data Connector

**Orchestration**
Logic Apps / Power Automate

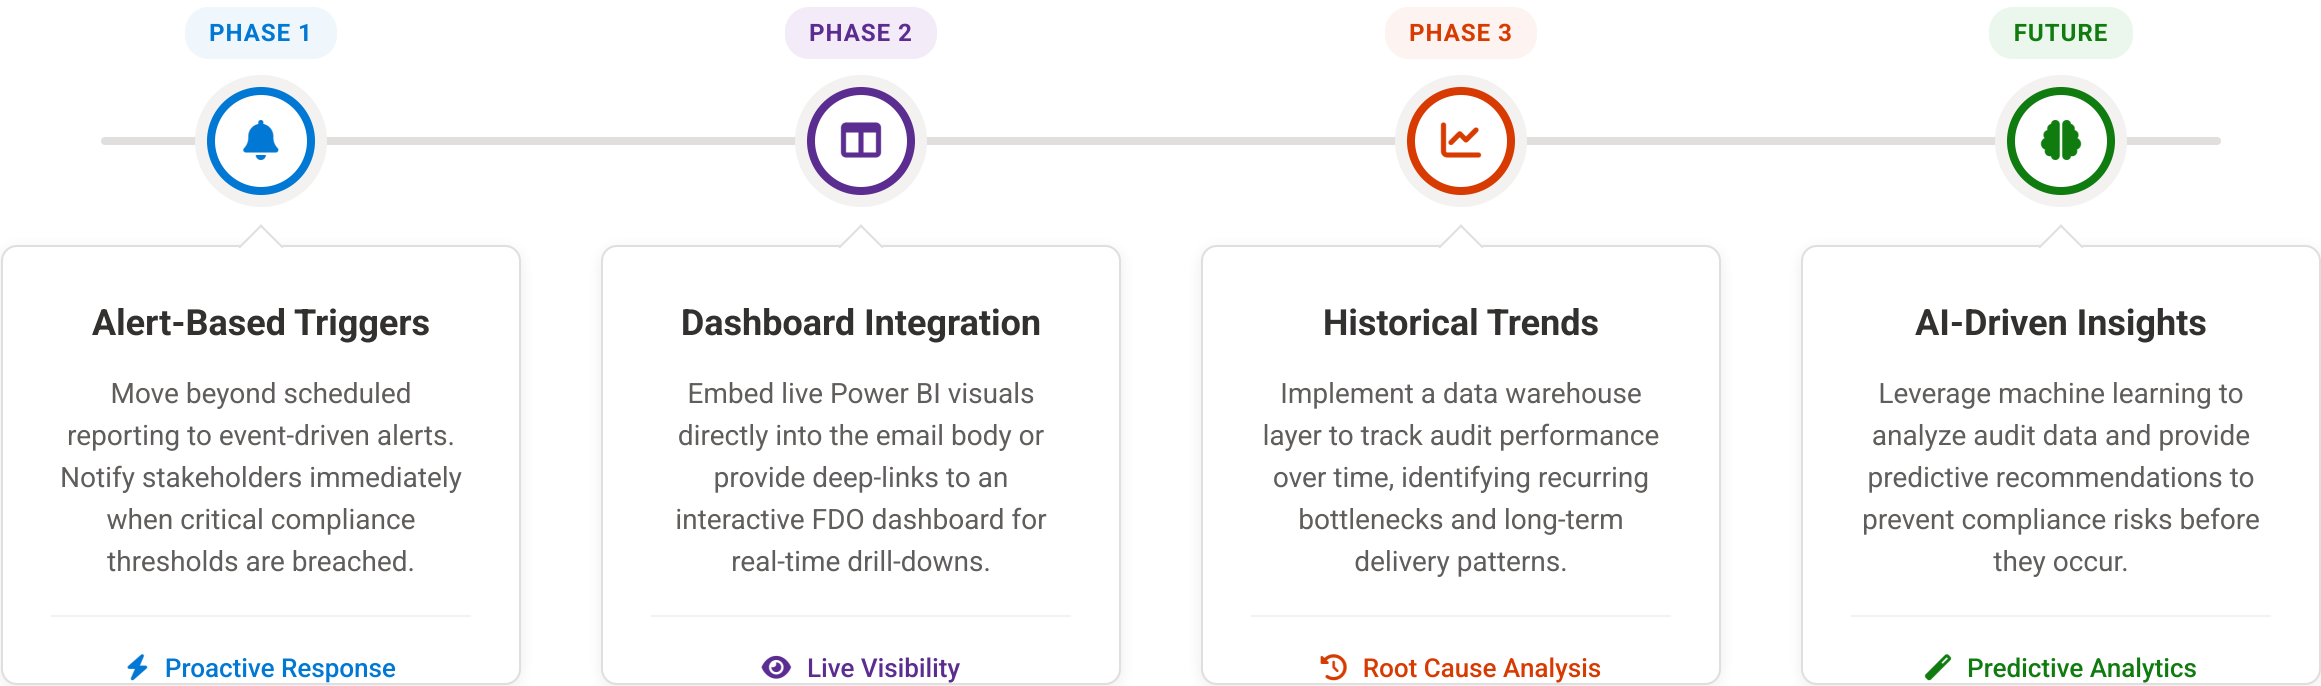

**Reporting Layer**
Power BI / Excel / PDF Generator

**Distribution**
Exchange Online / SMTP Relay

Future Enhancements

While the current implementation focuses on automated weekly reporting, the roadmap includes advanced capabilities for real-time visibility, trend analysis, and predictive insights.

Value Add: Automation vs. Visualization

What FDO Audit Automation Adds (That Power BI Cannot)

While Power BI excels at visualizing data, it remains a passive reporting tool. FDO Audit Automation acts as an active execution layer that drives compliance.

Capability	 Power BI REPORTING LAYER	 Audit Automation EXECUTION LAYER
Automatic audit triggers		
Rule-based audit validation		
Evidence completeness checks		
Auto-notification to owners		
SLA-based reminders & escalation		
Auto re-audit after fix		

Summary & Next Steps

FDO Automation / [Conclusion](#)

Executive Summary

Automating weekly FDO audit reporting transforms a manual, error-prone task into a reliable, consistent process. This ensures leadership and project teams always have timely visibility into compliance status.

- ✓ Standardized Reporting Format
- ✓ 100% On-Time Delivery
- ✓ Eliminated Manual Effort
- ✓ Enhanced Audit Readiness

Action Plan

- 1 Confirm Requirements**
Finalize recipient list, specific FDO fields to extract, and email template design.
- 2 Access & Configuration**
Provision Service Principal for FDO API access and configure Logic App permissions.
- 3 Development & Pilot**
Build the workflow connectors and run a pilot with the Audit team for 2 weeks.
- 4 Go-Live**
Enable full automation for all project stakeholders and decommission manual reports.

Project Ownership

Prototype: Automated Weekly Audit Report Email Distribution

Experience the end-to-end automation flow: from FDO data extraction and processing to final email delivery.

-  **Scope:** Covers extraction, transformation, summary generation, email composition, and delivery metrics.
-  **How to use:** Follow the visual flow to simulate a weekly scheduled run.
-  **Assumptions:** Uses sample audit data, simulated execution logs, and enterprise theme.
