Resolved

Action

Notification

Automated alerts sent to Project Managers for immediate hygiene resolution.

Daily

Use Case Overview

Maintaining operational excellence in Factory Delivery Orchestrator

Criticality of Hygiene

Maintaining project hygiene in FDO is fundamental for accurate reporting, regulatory compliance, and overall delivery governance. Without clean data, strategic decision-making is compromised.

The Challenge: Invisible Gaps

Hygiene-related issues—such as missing data, outdated statuses, or incomplete nominations—often remain unnoticed until audit time, leading to significant governance gaps.

The Solution: Automated Loop

This use case enables daily automated identification of hygiene issues, immediate notification to responsible Project Managers, and automated confirmation emails when issues are resolved.

 **STEP 1**
Identify Issues

 **STEP 2**
Notify PMs

 **STEP 3**
Confirm & Close

Daily Cycle

Problem Statement

Key friction points affecting FDO governance and efficiency

Late & Manual Detection

Project hygiene issues in FDO are often detected late or require manual intervention. This reactive approach delays data rectification and compromises real-time reporting accuracy.

Delayed Notification

Project Managers are not proactively notified of hygiene gaps. Without prompt alerts, stakeholders remain unaware of required corrective actions until critical milestones are at risk.

Lack of Closure Confirmation

The absence of a feedback loop means no confirmation is sent when issues are resolved, leading to uncertainty and unnecessary repeated follow-ups from governance teams.

Governance & Audit Impact

Persisting data gaps and unresolved hygiene items directly impact the organization's governance scores and readiness for internal and external compliance audits.

IMPACT CHAIN

 **Data Latency**
Outdated information

 **Communication Gap**
Silent failures

 **Audit Risk**
Compliance failures

*"Manual processes lead to a **reactive** rather than **proactive** governance model."*

Objectives

Targeted outcomes for the hygiene monitoring initiative

Daily Identification

Identify hygiene-related issues in FDO on a daily recurring basis to ensure real-time data accuracy.

Automated Notification

Notify Project Managers whose projects have hygiene gaps immediately upon detection.

Resolution Tracking

Track the lifecycle of hygiene issues from identification through to successful remediation.

Closure Confirmation

Send automated confirmation emails once hygiene issues are successfully resolved to close the loop.

Process Governance

Establishing a robust framework for data quality and accountability.

FREQUENCY
Daily

TARGET
100% Quality

Actors

Key entities involved in the hygiene monitoring ecosystem

Project Managers

Primary responsible party for maintaining project data. Receives notifications and executes corrective actions in FDO.

Delivery Governance / Audit Team

Oversees compliance standards, defines hygiene rules, and reviews aggregate reports and audit logs.

FDO (Factory Delivery Orchestrator)

The core system of record containing project data, status updates, and nomination details to be validated.

Automated Hygiene Service

The background service that executes rules, triggers alerts, and monitors resolution status daily.

INTERACTION MODEL

Governance

Automation

Hygiene Monitoring Service

Project Manager

Preconditions & Trigger

Requirements for automated hygiene monitoring initialization

Preconditions

Rules Defined

Hygiene rules and nomination criteria must be clearly defined within the FDO system configuration.

User Mapping

Active Projects must be correctly mapped to responsible Project Managers in the database.

Communication Channels

SMTP or Outlook integration must be configured and authenticated for sending notifications.

System Trigger

Automated Execution Schedule

Daily Schedule

The hygiene monitoring service is triggered automatically once every **24 hours** (e.g., at 01:00 AM server time).

End-to-End Workflow

Daily cycle from issue detection to resolution confirmation

Hygiene Evaluation Criteria

Key data points scanned daily for compliance and completeness

Project Status

Ensures project health indicators reflect the current reality.

- ✓ Flag if status update is older than 7 days
- ✓ Check for blank 'Current Phase' status
- ✓ Validate RAG status justification fields

IMPACT

High

Stage Mappings

Validates logical consistency between project stages and methodologies.

- ✓ Mismatch between Methodology and Phase
- ✓ Projects stuck in 'Initiation' > 30 days
- ✓ Closed projects with active tasks

IMPACT

Medium

Resource Nominations

Verifies that all critical project roles are assigned to active users.

- ✓ Missing Delivery Lead assignment
- ✓ Unassigned Solution Architect roles
- ✓ Inactive users mapped to active roles

IMPACT

Medium

Mandatory Fields

Checks for completeness of essential administrative data fields.

- ✓ Missing 'Go-Live Date' or 'End Date'
- ✓ Empty Client/Account Code fields
- ✓ Undefined Cost Center allocation

IMPACT

High

Notification Process

Automated alerts for hygiene issues found

Email Content

The automated email provides a structured summary to facilitate quick action:

Issue List

Detailed breakdown of hygiene issues grouped by project ID.

Impact & Severity

Severity level classification to prioritize resolution efforts.

Action Items

Clear corrective actions required to resolve the gaps.

Target Audience

Primary Recipient

Project Manager

The notification is routed directly to the specific Project Manager mapped to the flagged project in FDO.

Resolution & Confirmation

Tracking corrective actions and acknowledging compliance

Resolution Monitoring

Change Detection

System continuously observes updates in FDO, specifically tracking project status changes and corrections to mandatory fields.

Rules Re-evaluation

Nomination data and stage mappings are re-scanned against hygiene rules to ensure validity.

Compliance State

Projects are automatically marked as "Compliant" in the database immediately when all detected issues pass validation.

Confirmation Protocol

Automated Closure Acknowledgment

Email Sent

Once hygiene issues are resolved, a confirmation email is immediately sent to the **Project Manager** acknowledging the closure of the ticket and restoring green status.

Functional Requirements

Core specifications for the automated hygiene monitoring engine

Daily Hygiene Rule Evaluation

The system must execute a scheduled daily job to scan all active FDO projects against the defined set of hygiene rules (e.g., missing fields, outdated statuses) without manual intervention.

Project-to-Manager Mapping

Dynamically identify the responsible Project Manager for each non-compliant project to ensure notifications are routed correctly.

Automated Email Notifications

Generate and send personalized emails listing specific gaps, severity levels, and required actions directly to the mapped PMs.

Resolution Detection Logic

Continuously monitor FDO data changes to detect when a flagged hygiene issue has been corrected according to the rules.

Confirmation Email Trigger

Automatically trigger a "Closure Confirmation" email to the Project Manager once all flagged issues for a project are resolved.

FDO Backend

Non-Functional Requirements

Ensuring reliability, security, and traceability in FDO operations

Reliable Daily Execution

The system must guarantee execution of hygiene checks every 24 hours without fail. Fail-safe mechanisms must be in place to retry in case of transient connectivity issues.

High Accuracy in Hygiene Detection

False positives must be minimized to prevent alert fatigue. The rule engine must precisely interpret FDO data schemas and business logic to flag only genuine hygiene gaps.

Secure Access to FDO Data

Data extraction and validation processes must adhere to RBAC policies. System accounts used for monitoring must have least-privilege read-only access to sensitive project data.

Audit Trail of Notifications

All generated alerts, sent notifications, and system actions must be logged immutably. This ensures full traceability for compliance audits and troubleshooting.

Business Value

Outcomes of implementing automated hygiene monitoring

Improves Data Quality & Governance

Continuous daily scanning ensures FDO project data remains accurate, consistent, and compliant with organizational standards, eliminating the accumulation of "dirty data."

Reduces Manual Follow-ups

Automation replaces manual tracking and repeated email chasers. The governance team saves significant hours previously spent identifying gaps and notifying PMs.

Increases PM Accountability

Direct, automated notifications clearly assign ownership of specific hygiene gaps to responsible Project Managers, fostering a culture of immediate responsibility.

Enhances Audit Readiness

With issues resolved promptly on a daily basis, the system remains perpetually audit-ready, ensuring reporting accuracy for senior leadership reviews at any time.

Operational Excellence

Technology Stack & Future Enhancements

Underlying infrastructure and planned evolution of the monitoring service

Current Tech Stack

FDO (Factory Delivery Orchestrator)

Primary project data source and system of record.

Data Validation Engine

Logic core for executing hygiene rule checks against data.

Workflow Automation

Logic Apps / Power Automate for scheduling and orchestration.

Email Service

Outlook / SMTP integration for delivering notifications.

Audit Log / Dashboard

Tracking compliance history and resolution metrics.

Future Enhancements

Escalation Reminders

Severity-based triggers for unaddressed issues.

Hygiene Trends Dashboard

Visual analytics for long-term compliance tracking.

SLA-based Alerts

Automated notifications for overdue hygiene resolutions.

Teams Integration

Direct notifications via Microsoft Teams channels.

What the Proposed Hygiene Validation Product Adds

Product acts as a Hygiene Governance Engine on top of FDO

KEY CAPABILITIES	 Power BI Reporting Only	 Proposed Solution Hygiene Engine
 Rule-based validation (daily)	✗	✓
 Automated hygiene checks	✗	✓
 Real-time alerts to PMs	✗	✓
 Ownership-based notifications	✗	✓
 Auto-confirmation on resolution	✗	✓
