

Microsoft 365 Automation

Automated Meeting Minutes Generation

An enterprise solution leveraging **Microsoft Copilot**, **Teams**, and **Outlook** to streamline post-meeting documentation and improve productivity.

AI-Driven

Seamless Integration

Immediate Delivery

ENTERPRISE SOLUTION DESIGN

Use Case Overview

After a Microsoft Teams meeting concludes, the system automatically triggers an automated workflow. **Microsoft Copilot** processes the meeting transcript to extract key insights, decisions, and action items.

The generated Minutes of Meeting (MoM) are then formatted and immediately distributed via **Outlook** to all participants, ensuring no critical information is lost.

- ✓ Eliminates manual note-taking
- ✓ Ensures consistent formatting
- ✓ Immediate post-meeting delivery

End-to-End Automation

Meeting Concludes

Teams finalizes transcript & recording

AI Generation

Copilot creates structured MoM & Actions

Distribution

Outlook emails MoM to all attendees

THE CURRENT CHALLENGE

Manual Processes Create Inefficiency

Despite the availability of meeting recordings, the manual preparation of Minutes of Meeting (MoM) remains a significant bottleneck in corporate productivity.

This manual approach often leads to delayed communication, loss of critical information, and lack of accountability for action items.

"We spend more time documenting the meeting than acting on it."

Time-Consuming Effort

Manually listening to recordings and typing notes takes 2-3x the meeting duration, diverting focus from core tasks.

Inconsistent Documentation

Format and quality vary by note-taker, making it difficult to track decisions historically across different projects.

Information Loss

Key action items and owners are often missed or vaguely defined, leading to lack of follow-up and accountability.

Objectives

Delivering efficiency through intelligent automation

Automated Generation

Leverage Copilot to automatically process Microsoft Teams meeting transcripts and generate comprehensive meeting minutes without manual intervention.

Accuracy & Structure

Ensure outputs are structured, accurate, and actionable. Identify key decisions, assign owners to action items, and maintain a consistent format.

Immediate Distribution

Eliminate delays by distributing the finalized MoM via Microsoft Outlook to all participants immediately after the meeting concludes.

System Actors

Key roles and technology components interacting in the workflow

HUMAN ACTOR

Meeting Organizer

Initiates the Teams meeting, configures options, and validates generated minutes.

HUMAN ACTOR

Meeting Participants

Attendees contributing to discussions who are the recipients of the final MoM.

PLATFORM

Microsoft Teams

Hosts the meeting and provides the real-time transcription service used as input.

AI ENGINE

Microsoft Copilot

Processes transcripts to extract summaries, key decisions, and action items.

DELIVERY

Microsoft Outlook

Exchange Online service handling the formatting and delivery of MoM emails.

Preconditions & Trigger

System requirements and event activation for the automated workflow

☰ System Prerequisites

- ✓ **Teams Transcription Enabled**
Meeting policy must allow transcription. Copilot relies on the generated transcript to create meeting minutes.
- ✓ **Copilot License & Configuration**
Microsoft Copilot for Microsoft 365 must be licensed and enabled for the tenant and specific users involved.
- ✓ **Authenticated Participants**
Participants must be authenticated in Microsoft 365 (Azure AD) to ensure secure access to generated artifacts.

⚡ Workflow Trigger

Meeting Ends

The automation pipeline initiates immediately when the Microsoft Teams meeting status changes to "Completed".

End-to-End Workflow (Part 1)

From meeting conclusion to AI-driven insight generation

End-to-End Workflow (Part 2)

Automated distribution and closure of the meeting lifecycle

5

Outlook Email Composition

Copilot constructs a professional email draft containing the finalized meeting minutes, formatted for clarity and readability.

Subject: Minutes of Meeting – Project Sync

To: All Attendees

Meeting summary attached. Action items have been assigned...

Structured Body Content

Optional Word/PDF Attachment

AI-Generated Subject Line

6

Email Distribution & Completion

The system automatically sends the email via Microsoft Exchange Online to all authenticated participants. The workflow concludes successfully.

Sent to All Participants

MoM Components

Structured content automatically generated by Microsoft Copilot

AI Generated

Meeting Summary

A concise executive overview capturing the meeting's primary context, objectives, and high-level outcomes derived from the full transcript.

- Context & Objectives
- Attendees & Absentees

Key Discussion Points

Bulleted highlights of main topics debated, strategic ideas proposed, and significant insights shared by various participants.

- Topic A: Challenges discussed
- Topic B: Proposed solutions

Decisions Made

A clear record of agreed-upon resolutions, budget approvals, and finalized directions to ensure alignment across the team.

- Budget approved for Q4
- Vendor selection confirmed

Approved

Final

Action Items

Structured tasks with specific owners and deadlines detected from the conversation context, ready for follow-up.

- Draft project plan
- Schedule review

Postconditions

Successful outcomes and final state of the automation workflow

Participants Receive MoM

All meeting attendees automatically receive the structured minutes via Microsoft Outlook immediately upon processing completion.

Official Meeting Record

The generated document serves as the immutable, official record of the discussion, stored securely within the Microsoft 365 tenant.

Action Items Communicated

Key decisions and tasks are clearly extracted and assigned to owners, ensuring accountability and facilitating effective follow-up.

Functional Requirements

Core system capabilities essential for automated Minutes of Meeting generation

Core Functional
Specification

Automatic Transcript Ingestion

System must automatically detect completed Teams meetings and retrieve the finalized transcript from Microsoft 365 storage without user initiation.

AI-Based Summarization

Utilize Copilot's natural language processing to analyze dialogue, extracting a concise summary, key decisions, and action items with owners.

Predefined MoM Template

Output generated content into a standardized corporate template to ensure consistency in formatting, branding, and structure.

Outlook Email Automation

Construct and send a structured email via Exchange Online to all meeting participants immediately following content generation.

Approval Workflow (Optional)

Provide a staging step where the meeting organizer can review, edit, and approve the generated minutes before final distribution.

Non-Functional Requirements

Quality attributes ensuring system reliability, security, and performance

System Quality
Standards

High Summarization Accuracy

The AI model must reliably capture context and intent with minimal hallucination, ensuring minutes serve as an accurate official record.

Microsoft 365 Compliance

Strict adherence to tenant data boundaries and privacy policies (GDPR, etc.), ensuring data never leaves the secure enterprise environment.

Quick Generation Time

MoM generation and email distribution must complete within minutes of the meeting's conclusion to ensure timely communication.

Enterprise Scalability

The architecture must support concurrent processing of high volumes of meetings across the organization without service degradation.

Business Value

Strategic benefits of automating meeting documentation with Copilot

Reduces Overhead

Eliminates hours of manual note-taking, transcription, and formatting. Frees up employees to focus on high-value strategic tasks rather than administrative churn.

Improves Accountability

Automatically captures and assigns action items with clear owners. Ensures tasks are tracked and nothing falls through the cracks after the call ends.

Consistent Communication

Standardizes the format and quality of meeting minutes across the organization. Ensures every participant receives the same structured information.

Native Integration

Leverages existing Microsoft 365 investments and security boundaries. No third-party plugins or data export required, keeping data secure within the tenant.

Technology Stack

Leveraging the power of the Microsoft 365 ecosystem

Microsoft Teams

MEETING & TRANSCRIPTION

Hosts the virtual meeting environment and captures real-time audio. Generates the verbatim transcript that serves as the raw data source for analysis.

Microsoft Graph API

DATA ACCESS & CONTEXT

Provides the unified programmatic interface to securely access meeting metadata, participant details, and transcript content within the tenant.

Microsoft Copilot

ANALYSIS & GENERATION

Applies advanced Large Language Models (LLMs) to synthesize transcripts into structured minutes, extracting key decisions and action items.

Microsoft Outlook

DISTRIBUTION CHANNEL

Delivers the finalized Minutes of Meeting email to all attendees via Exchange Online, ensuring reliable and immediate communication.

Thank You

We are now open for questions and discussion regarding the automated meeting minutes generation workflow.
